

Build Your First AI Agent in Minutes.

No coding. No complexity. Just curiosity.

AI Playground is a safe, plug-and-play creative space where students pick a prebuilt AI agent, shape it to their own interests, and bring their ideas to life - whether that's a story companion, a homework helper, a debate partner, or something entirely their own.

No Code Needed	Prebuilt Agents	Safe & Moderated	Parent-Visible

What is an AI Playground?

Think of it as a **creative workshop for AI** - but without the complexity. Students explore a library of ready-made AI agents (mini-assistants designed for specific interests), customise them to their voice and style, and share what they create with friends, classmates, and teachers.

No coding. No setup. No overwhelm. Just **pick, tweak, build, share** - and discover what AI can do when *you're the one in charge*.

FOR AGES Grades 5–12	SKILL LEVEL Zero to Creative	TIME TO FIRST AGENT Under 10 Minutes
-------------------------	---------------------------------	---

HOW IT WORKS

From Curiosity to Creation in 4 Steps

01 Pick an Agent Browse 12+ prebuilt AI agents across creativity, academics, science, wellness, and more. Each one has a clear purpose and personality.	02 Customise It Give your agent a name, tweak how it talks, choose its knowledge focus, and add your own twist - all through simple sliders and prompts.
03 Build & Test Chat with your agent, test how it responds, and refine it until it feels right. Every iteration teaches prompt-thinking and AI logic.	04 Share & Showcase Share your creation with friends and classmates, get feedback, or showcase it at the annual Skillzza AI Showcase.

The Prebuilt Agent Library

12 starter agents. Endless possibilities.

Every agent is designed by educators and AI experts, pre-tested for age-appropriate content, and ready for students to customise. Pick one that matches your interest - or remix several to create something entirely new.

 Story Weaver Co-write stories, invent characters, and build fictional worlds with a creative writing companion.	 Homework Helper A patient tutor that explains concepts, walks through problems, and answers doubts across subjects.	 Career Coach Explore career options, understand different paths, and get guidance tailored to your interests.
--	--	--

✦ Debate Buddy Practise argumentation, prepare for debates, and strengthen critical thinking with a sparring partner.	✦ Science Explorer Ask big questions, design experiments, and understand how the world works through curiosity-led chats.	✦ Math Mentor Break down tricky problems step by step, practise techniques, and build confidence in numbers.
✦ Code Companion Learn to code, debug errors, and build your first programmes with a friendly coding buddy.	✦ Climate Strategist Explore sustainability scenarios, model climate solutions, and design ideas to help the planet.	✦ Language Buddy Practise English, Hindi, French, Spanish, or Mandarin through natural conversation.
✦ Wellness Guide Mindfulness prompts, journaling companions, and gentle support for emotional well-being.	✦ Space Explorer Journey through galaxies, understand space missions, and ask anything about the universe.	✦ History Time Machine Travel through time, meet historical figures, and explore events through immersive storytelling.

***Can't find the agent you want?** Students at Grades 8+ can use the **Agent Builder** to create entirely original agents from scratch - no coding required.*

What Students Learn - Without Realising It

Play is the best teacher. Here's what's happening behind the fun.

Prompt Thinking The most future-critical skill of our time - how to ask AI clearly, specifically, and creatively to get great results.	Logical Sequencing Breaking problems into steps - the foundational mindset for coding, systems thinking, and structured reasoning.
---	---

Creative Confidence The courage to iterate, test, fail, and refine - core to every creative and entrepreneurial endeavour.	AI Literacy & Ethics Understanding what AI can and cannot do, its biases, and how to use it responsibly - digital citizenship in practice.
Self-Directed Learning Curiosity-led exploration where students choose what to build and learn - the habit of lifelong learning, formed early.	Computational Empathy Understanding how machines 'think' and learning to communicate with them effectively - an essential modern skill.

Safe by Design. Transparent by Default.

Because 'AI for kids' should mean safety first - not safety eventually.

Every aspect of AI Playground is engineered with child safety at its core. We didn't adapt an adult AI platform for children - we built this for children from the ground up.

- **Content Moderation, Always On:** Every conversation is scanned in real-time against child-safety policies - inappropriate content is blocked before it ever reaches the student.
- **Parent Dashboard:** Parents see their child's agents, conversation summaries, and time spent - complete visibility without intrusive monitoring.
- **No Personal Data Sharing:** Agents never ask for real names, contact details, addresses, or personal information. Full stop.
- **Teacher-Moderated at School:** When deployed in classrooms, teachers have admin-level visibility into cohort usage and student creations.
- **Educator-Approved Agents:** Every prebuilt agent is designed with curriculum experts and pre-tested with age-appropriate safeguards.
- **Time & Usage Limits:** Built-in guardrails help families and schools set healthy usage limits - no endless scroll dynamics.

Our Promise to Parents

If our Playground wouldn't feel right for our own children, it doesn't belong on your child's screen. Every design decision is made with that filter first.

From Play to Mastery

The Playground is just the beginning.

What starts as curiosity in the Playground naturally progresses into structured learning through Skillzza Nova's full ecosystem. Every agent a student builds becomes a doorway to deeper skills.

EXPLORE	AI Playground Students discover AI through play - picking, customising, and sharing agents. Time: minutes to hours.
LEARN	Skill Studios Structured studios across 15+ domains deepen the skills students started exploring in the Playground. Time: weeks to months.
APPLY	Virtual Internships Students use their skills on real-world, industry-inspired projects with verifiable credentials. Time: 4–6 weeks.
LEAD	Fellowships & Showcases Top students become mentors, speakers, and programme ambassadors. Time: year-long engagement.

For Schools & Educators

Bring AI Playground into your classroom as a structured, moderated learning tool - not a black-box toy. Perfect for AI clubs, computer labs, creative writing periods, and cross-disciplinary projects.

Teacher Admin Dashboard Cohort-level visibility, engagement analytics, and the ability to curate which agents are available during class time.	Lesson Plan Library Ready-to-use lesson plans mapping each prebuilt agent to specific curriculum outcomes across subjects.
Classroom Competitions Pre-designed creative challenges - 'Build the Best Story Weaver', 'Design a Wellness Agent' - ready to run in class.	Integration With Studios Students use Playground agents to warm up before diving into deeper Skill Studios - creating a seamless learning flow.
